

RFS Traction Analyzer

Why wonder or guess regarding the current condition of your tungsten carbide coatings? Our exclusive and **patented RFS Traction Analyzer** can provide you with the real numbers.

We inspect your coatings on site and provide you with a detailed report. This information is most valuable in deciding when your traction coatings need to be cleaned, restored or replaced, so you can maintain a trouble-free winding operation.

This inspection takes only a few minutes, and does not interfere with your production. Our technician waits until the roll is shut down momentarily between sets.

For more detailed information, please call our office at **1-800-225-7170**.

Traction Analyzer Principle
