### The Old Fourdrinier's Disease

*(which attacks many parts of the wet end of the paper machine)*

Many older paper machines suffer from this common ailment caused by years of corrosion. If your wet end parts look like the ones pictured on the left below, **Racine Flame Spray** can restore them like the parts pictured on the right.

We will pick up the parts at your mill or you can have them shipped to our facility. We will remove the rust and scale and apply a metallized Zinc-Aluminum coating. This coating will protect your parts from this terrible 'disease' and will

be returned to you in as-good-as new or better condition.

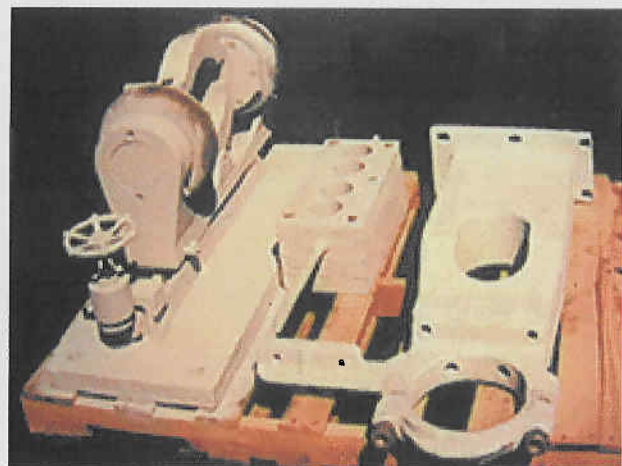

This service can be completed within 2-3 days, depending on your location and the number of pieces.

Don't let this sickness attack your paper machine any longer. Help prevent and eradicate "Old Fourdrinier's Disease".

Call RFS today at **1-800-225-7170** for more information on this and solutions to your surface engineering problems.
